

TELEVISION ROOM CONTROL INTERFACE - ENSEO

DESCRIPTION

The Enseo Room Control Interface is a member of INNCOM's Integrated Room Automation System (IRAS). Using the TV remote control, guests can make changes to in-room temperature and light settings, signal privacy or make up room at their doorway, or initiate other guest service requests.

The interface is composed of a PC501RF Converter connected to the Enseo SetTop Box by a USB port. The software displays the control "widgets" on-screen.

APPLICATION

The INNCOM-Enseo interface offers an integrated controls solution of room devices using the TV remote control. It uniquely offers uninterrupted device to device in-room communication, instead of through a server to server connection.

This layer of control is designed to provide the ultimate in convenience. Guests can control temperature, lighting, annunciation devices, drapes, sheers and initiate service requests using the TV remote control unit. The controlled devices are displayed on the TV as "widgets" in a minimized display window that allows the guest to continue to watch their favorite program.

OPERATION

For the guest, operating the ENSEO-INNCOM interface is as easy as changing a channel or increasing the volume.

Access to the widgets display is gained by pressing the Room Controls button on the remote control unit. The guest can then use the arrow keys on the remote to navigate through as well as control various room controls pictured in the widgets.

All communication and control operates within the confines of the room, increasing through input of commands and system reliability.

FEATURES

- In-room stand-alone device
- Intuitive user interface
- Customizable control display
- View TV while controlling room

SPECIFICATIONS

- PC501 Dimensions:
3.625" W x 3.625" H x .875" D
